

Care Sheet

Spoofleaf Sundew -Drosera Spatulata

Care Consideration	Description
Lighting Requirement:	13-16 hours of light exposure through natural or artificial light.
Water:	Always keep the soil moist, but do not create swamp-like conditions. The water tray method is optimal.
Temperature:	45 – 90 F (7-32 C)
Trimming:	Occasionally trim dead leaves.
Feeding:	Place the plant where there is access to live feed or feed it manually. Flies, bloodworms, mealworms, and gnats are excellent food options.
Fertilizers:	Not required.
Propagation:	Seeds, leaf pullings, root cuttings.
Pots:	Employ plastic, glazed ceramic or glass pots with drainage.
Repotting:	No need to repot frequently.
Dormancy:	No required.
Outdoor vs Indoor growth:	Indoor growing is preferred to secure the lighting and temperature requirements.
